

Research interests Algorithms and lower bounds, with particular interests in communication complexity, fair division, exact and exponential-time algorithms, mechanism design, and computational social choice.

RESEARCH PROFILE

- **Communication complexity and interlacing (2025–26)**: I refuted the strongest direct-sum conjecture for total functions in deterministic communication complexity (STOC 2025). Using relaxed interlacing, I helped prove NP-completeness of computing this complexity from a truth table, answering Yao’s 1979 question. Exact NP-hardness was independently proved by Hirahara, Ilango, and Loff. These results underpin my interlacing programme on hardness and protocol structure.
- **Lossless hardness condensation (2026)**: My sole-author preprint answers Hatami’s question on extracting small, nearly maximally hard submatrices from total communication problems.
- **Fair division (2016–26)**: I developed bounded envy-free cake-cutting protocols for four agents and for any number of agents (STOC and FOCS 2016), settling a longstanding open problem and leading to an invited *Communications of the ACM* article. Recent work covers goods, chores, and cake (EC 2026); best-of-both-worlds fairness for mixed goods and chores (SODA 2027, to appear); optimal subsidy bounds; counterexamples to EFX for submodular and subadditive valuations; and the incompatibility of EF1 and Pareto optimality for submodular valuations (WINE 2026, to appear).
- **Algorithms, apportionment, and mechanism design**: I resolved the 2024 threshold-monotonicity conjecture for Sampford apportionment. Other work includes NP-completeness of the winner problem for balanced knockout tournaments, exponential-time approximate counting (ESA 2026), and a strategyproof-in-expectation constant-factor approximation for three-facility location, addressing a question from 2010.

ACADEMIC AND PROFESSIONAL EXPERIENCE

UNSW Sydney, Australia	2024–2026
School of Computer Science and Engineering; research and teaching appointments	
Lecturer, COMP3821	Term 3, 2026
Extended Algorithm Design and Analysis; lecturer in charge: Serge Gaspers.	
Postdoctoral Fellow	Feb 2026 – Dec 2026
Adviser: Haris Aziz	
Lecturer, COMP9020	Term 2, 2026
Foundations of Computer Science	
Postdoctoral Fellow	2024, 2025
Adviser: Serge Gaspers; May–Sep 2024 and Aug–Dec 2025	
Science Communicator, <i>Up and Atom</i>	2022–2024
Scriptwriting, animation, and field production for mathematics and theoretical computer science videos.	
Postdoctoral Fellow, Data61, CSIRO, Australia	Mar 2019 – Feb 2022
Advisers: Haris Aziz and Toby Walsh	
Postdoctoral Fellow, Carnegie Mellon University, United States	Sep 2016 – Sep 2018
Adviser: Ariel Procaccia	

EDUCATION

PhD, UNSW Sydney, Australia	Awarded June 2017
Thesis submitted March 2017: <i>Upper Bounds for Cake Cutting</i> .	
Supervisor: Serge Gaspers; Co-supervisor: Toby Walsh	
MSc in Computer Science, University of Birmingham, United Kingdom	Sep 2011 – Sep 2012
Thesis: <i>Computing Stable Sets in Pillage Games</i> ; Supervisor: Manfred Kerber	
BSc in Physics, University of Birmingham, United Kingdom	Sep 2008 – Jul 2011

PREPRINTS AND MANUSCRIPTS

- Simon Mackenzie. *Lossless Hardness Condensation in Deterministic Communication Complexity*. [arXiv: 2609.28691 \[cs.CC\]](#) (2026). Sole author.
- Haris Aziz, Simon Mackenzie, and Mashbat Suzuki. *Sampford Apportionment Satisfies Threshold Monotonicity*. [SSRN preprint](#). Resolves the threshold-monotonicity conjecture of Correa et al. (2024).
- Haris Aziz, Simon Mackenzie, and Mashbat Suzuki. *Anchoring for Truthfulness: The Random-Anchor Volume Mechanism for Multi-Facility Location*. [arXiv: 2608.16550 \[cs.GT\]](#).
- Xinhang Lu, Simon Mackenzie, and Mashbat Suzuki. *Optimal Subsidy Bounds for Goods and Chores: One Dollar Each Suffices*. [arXiv: 2607.10089 \[cs.GT\]](#).
- Simon Mackenzie and Mashbat Suzuki. *Counterexamples to EFX for Submodular and Subadditive Valuations*. [arXiv: 2605.06451 \[cs.GT\]](#). Original preprint; subsequently combined with the paper of Akrami, Mayorov, Mehlhorn, Srinivas, and Weidenbach.
- Katie Clinch, Serge Gaspers, Tao Zixu He, Simon Mackenzie, and Tiankuang Zhang. *A Faster Randomized Algorithm for Vertex Cover: An Automated Approach*. [arXiv: 2510.09027 \[cs.DS\]](#).
- Serge Gaspers, Tao Zixu He, and Simon Mackenzie. *NP-Completeness of Deterministic Communication Complexity via Relaxed Interlacing*. [arXiv: 2508.05597 \[cs.CC\]](#). Exact NP-hardness was independently proved by [Hirahara, Ilango, and Loff](#). [Interactive Lean proof inspector](#) (LLM-assisted experiment) ([scope and assumptions](#)).
- Haris Aziz, Serge Gaspers, and Simon Mackenzie. *Computational Complexity of Hall Set Problems*. Manuscript.
- Ben Abramowitz, Simon Mackenzie, and Nicholas Mattei. *Balancing Approximations in Facility Location*. Manuscript.

Related work on formal verification includes [Beyond the Library’s formalisation of our direct-sum paper](#) and [Bertram, Lai, and Hsu’s verification of a three-agent variant of our cake-cutting protocol](#). I am interested in how such tools relate to my work.

AWARDS

ICAPS Best Paper Award	2018
Malcolm Chaikin Prize for Research Excellence in Engineering	2018
CISRA Best Research Paper Prize	2016
School of Computer Science and Engineering, UNSW Sydney	
Best MSc Project for Outstanding Research Quality	2012
University of Birmingham Computer Science Department	

TEACHING EXPERIENCE

UNSW Sydney

COMP3821 Extended Algorithm Design and Analysis

2024–2026

Teaching the whole course (all lectures and day-to-day delivery), Term 3, 2026; lecturer in charge: Serge Gaspers.
Project supervisor and tutor: Feb–May 2024; Sep–Dec 2025.

COMP9020 Foundations of Computer Science

2024–2026

Lecturer: Term 2, 2026.

Tutor: May–Aug 2024; Feb–Apr 2025. Guest lecturer: Feb–Aug 2024.

COMP3121 Algorithm Design and Analysis

Sep 2024 – Dec 2024

Guest lecturer

COMP4141 Theory of Computer Science

Feb 2024 – May 2024

Tutor

SUPERVISION

Rayan Shahara, Honours Thesis

Feb 2026 – Dec 2026

Research Topic: *OXS Valuations in Fair Division* (provisional)

Tao Zixu He, Honours Thesis

Sep 2024 – Sep 2025

Research Topic: *NP-Hardness of Communication Complexity*

Tao Zixu He, Special Research Project

May 2024 – Sep 2024

Research Topic: *Measure and Conquer for Randomised Algorithms*

Qi Wang, Master's Thesis

May 2024 – Sep 2024

Research Topic: *Exponential-Time Approximate Counting Algorithms*

MEDIA FEATURES

My work on Sampford apportionment with Haris Aziz and Mashbat Suzuki was covered by **Spektrum der Wissenschaft** (25 September 2026) and **UNSW Newsroom** (29 September 2026).

Selected coverage includes **Scientific American**, **Quanta Magazine**, **Science News** (2023), **The Sydney Morning Herald**, and a 2025 UNSW Newsroom feature on the STOC 2025 direct-sum result. My work on cake cutting was also highlighted in Colin Stuart's book *10 Things You Need to Know About Numbers*. It has been popularised through videos on channels including "Numberphile", "Science4All", and "Up and Atom" (2024), with millions of views.

Lance Fortnow and Bill Gasarch discussed my cake-cutting paper on the **Computational Complexity blog**. They subsequently named it complexity theory paper of the year. Richard Lipton and Ken Regan later discussed the CACM version in *Gödel's Lost Letter and P=NP*.

INVITED TALKS

- Dagstuhl Seminar 16232: *Fair Division*, Schloss Dagstuhl, 2016
- Highlights of Algorithms (HALG), 2017
- Malcolm Chaikin Invited Talk, 2019
- IJCAI Sister Conference Track, 2019
- Max Planck Institute, virtual invited talk, July 2026

ACADEMIC SERVICE

- Journal referee in 2026 for *Autonomous Agents and Multi-Agent Systems*, *Journal of the ACM*, *Mathematical Social Sciences*, and *Social Choice and Welfare*.
- Conference referee for AAAI, AAMAS, SODA, EC, and related venues.
